2 BACKGROUND

The Coupa Invoicing module will enable users to better manage Good Receipts (GRs) and Invoices. In this document, we will be covering the Coupa Invoicing process which involves the creation of Invoices and how will this be carried out for Carsome going forward.

3 INVOICING

This section will speak about the invoicing process for Carsome as well as how Carsome can leverage Coupa in the best possible way for their invoice processing.

3.1 INVOICE STRUCTURE

The invoice header consists of the following fields:

Invoice Header	
Field	Description
Supplier (mandatory)	Supplier Name
Invoice Number (mandatory)	Invoice Number from the original invoice shared by supplier
Invoice Date (mandatory)	Invoice Date
Payment Term	Payment term: should come by default from PO for PO backed Invoices
Currency (mandatory)	Invoice currency
Control Total (mandatory)	Invoice Total Amount
Delivery Number	Delivery number
Status	Invoice Status
Supplier Note	Supplier Note added in the Invoice Reference to the Raid Log S.No :73
Attachments	Any attachments to be added in the Invoice
Image Scan (mandatory)	Supplier Note added in the Invoice Reference to the Raid Log S.No :204
Requester	Any attachments to be added in the Invoice
Bill To and Ship To details	Bill to and Ship to information
Chart of Accounts (mandatory)	Chart of account for the invoice
Supplier Info	Remit to (Bank Info), Invoice From, Ship From, Supplier Tax ID, Override Tax country
Remit-to:	Remit-To Address This is the address that lets you know where to send the payments to (Skip for Carsome as the Bank information will not be stored in Coupa, it will be saved and updated in NetSuite)
Tolerance Reason Code	AP finance would require to add tolerance reason code for the tolerance added Reference to the Raid Log S.No :161
Advance Payment	Checked box to initiate advance payment invoice Reference to the Raid Log S.No :81
Memo	Invoice Field added to capture the Memo details Reference to the Raid Log S.No :201

3.2 INVOICE OVERVIEW

Invoicing Overview

3.2.1 Invoicing Channels

An invoice can be created via the following channels which will be applicable for CARSOME:

1. Coupa Supplier Portal (CSP)

- Who: Used by suppliers registered on the Coupa Supplier Portal.
- How: Suppliers directly submit invoices (PO and non-PO) through CSP.
- Benefits: Real-time visibility, automatic validation, and reduced manual errors.

2. SAN/PO Link

- Who: Suppliers using integrated PO-flip or document upload functionality outside of CSP.
- How: Suppliers send PO-based invoices via the SAN (supplier automation network) or PO link integration.
- Benefits: Seamless processing for PO invoices with minimal AP intervention.

3. AP Mailbox / Invoice Smash (OCR)

- Who: Suppliers or internal business users.
- How:
 - Suppliers email invoices to a designated AP mailbox.
 - The Invoice Smash OCR tool parses and digitizes invoice content.
 - Business users can also submit non-PO invoices manually through this channel.
- Benefits: Enables traditional email invoicing while leveraging automation to minimize data entry and support compliance.

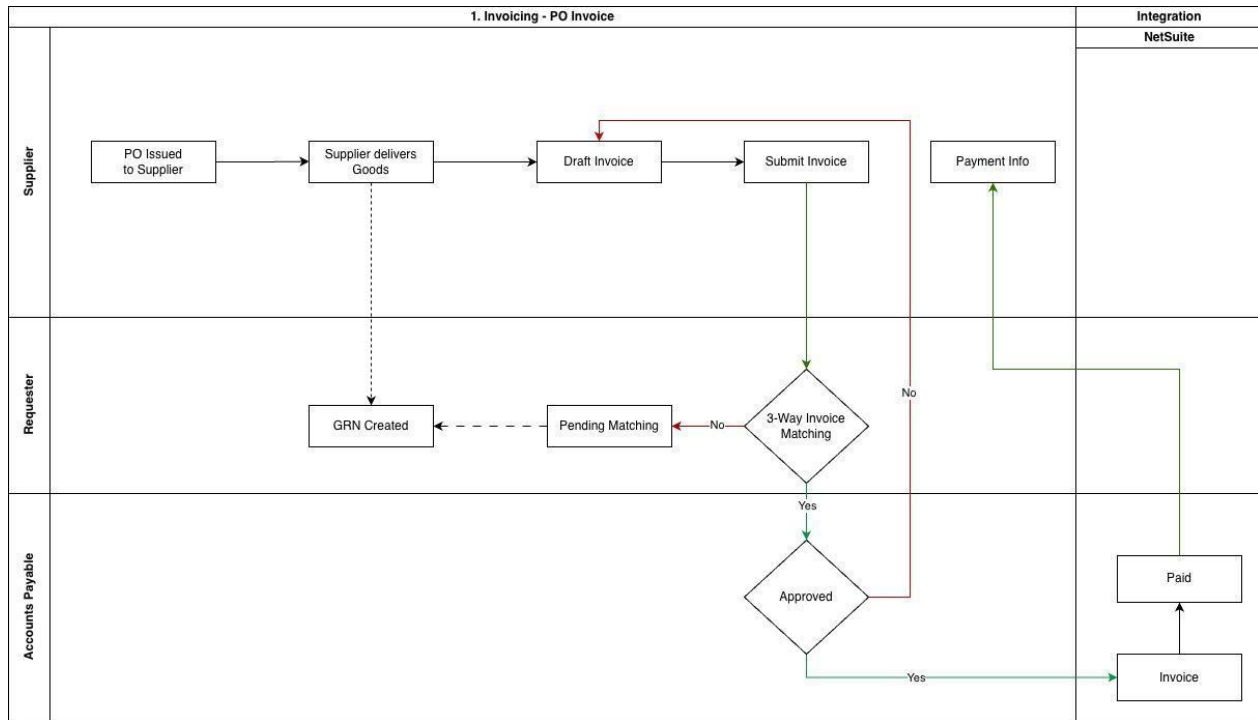

4. Direct Entry

- Who: Internal AP Clerks.
- How: AP Clerks manually enter PO and non-PO invoices into Coupa for suppliers unable to utilize digital channels.
- Benefits: Fallback for exceptions or legacy suppliers; allows centralized control and oversight.

Business Requirement Document (BRD) – Coupa Invoice Management

3.2.1.1 PO Backed Invoicing

*PO Backed Invoice flow.*

Link: https://drive.google.com/file/d/1FLSW5H6dWYLMFE-td9RXYGgbkXDat_P3/view?usp=drive_link

Process	Description
PO Issued to Supplier	Coupa issues PO to the supplier via configured channel (CSP, cXML, or email).
Goods Delivered	Supplier delivers goods/services based on the PO.
GRN Created	Requester acknowledges receipt by creating Goods Receipt Note (GRN) in Coupa.
Flip PO to invoice	The supplier navigates into the Purchase Order section in CSP or SAN and flips the relevant PO into an invoice. The Supplier can also pick lines from multiple PO and create a single invoice. (Reference to the Raid Log S.No :74)
Draft & Submit Invoice	The supplier will fill in the missing details and submits the invoice
3-way matching	Coupa performs auto-matching of PO, GRN, and Invoice.
Pending Matching/ Receipt Check	The supplier created invoice comes into Coupa and checked for an available receipt. The Requester will get a notification in case the invoice goes into the pending receipt status.
VAT Check	Coupa checks if VAT or other charges apply before approval. The taxes to be added on the line level.
Invoice Review (AP Team) / Edit Invoice if applicable	AP Team reviews invoice details and updates info if needed.
Reject invoice	If the associate AP team rejects the invoice, the invoice will go back to the rejected status. There are 2 possible actions here: 1. AP can dispute the invoice back to the supplier and the supplier can correct the invoice and send it back to CARSOME. 2. The AP can rectify the invoice in the system and further submit it for approvals.

Business Requirement Document (BRD) – Coupa Invoice Management

Invoice disputed by AP	In case the Associate Finance disputes the invoice, the supplier will receive this dispute which can be further corrected by the supplier and shared back to Carsome. (Reference to the Raid Log S.No :76)
Approved Invoice	Invoice is fully approved and marked for payment and sent to NetSuite via Integration
Payment Update	Payment processed in NetSuite; Coupa receives status update.
Paid	Final invoice status is updated as “Paid” in Coupa.
AP Team to Create Invoice	
Login to Coupa	These are the PO backed invoices which can be created by the AP directly in Coupa
Flip PO to invoice	The AP professional will navigate to the Purchase Order tab and flip the PO to an invoice.
Submit Invoice	The AP will fill in the mandatory details in an invoice and submit the invoice for approval. The approval process would be the same as above.

Enable only AP users to flip PO into invoice in Coupa (For exceptional Supplier)

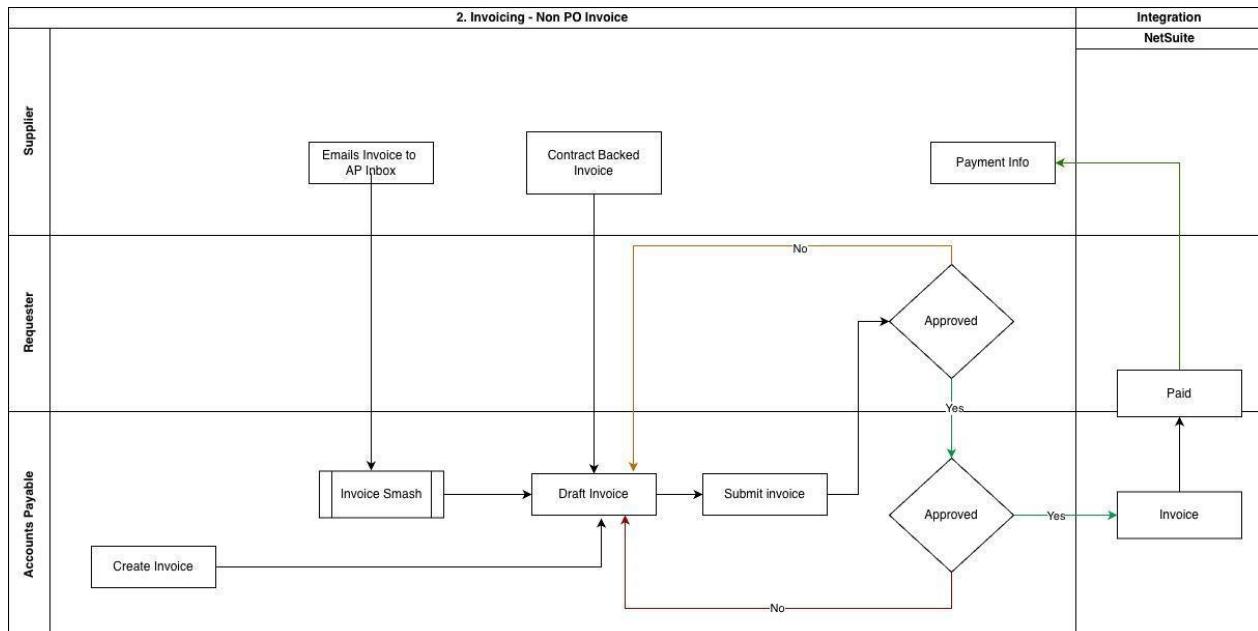

(Reference to the Raid Log S.No :158)

3.2.2 Non-PO Backed Invoicing

Non-PO Invoice Creation:

- Direct non-PO invoice Creation
- Through Invoice Forms

3.2.2.1 Direct non-PO invoice Creation

Non-PO Invoicing

Link : https://drive.google.com/file/d/1ieUmvTSzc8uVu0JKTDAMBT5Cz93HVs-G/view?usp=drive_link

Business Requirement Document (BRD) – Coupa Invoice Management

Process	Description
Draft & Submit Invoice	Supplier drafts and submits a non-PO invoice. (Direct Invoice, Invoice smash, Contract Backed Invoicing)
Invoice to AP Inbox	Supplier or requester emails the invoice to the AP shared mailbox.
Create Invoice (AP Clerk)	AP Clerk manually creates invoice in Coupa if not received via CSP.
Invoice Smash	AP Clerk uses invoice smash to split or prepare the invoice if necessary.
Check & Update Info	Invoice is reviewed for completeness, with details validated and updated as needed.
Requester Approval	Requester reviews the invoice to confirm the legitimacy of the spend.
Financial Approval	If required by DoA or value, the invoice routes to a Financial Manager.
Final AP Clerk Approval	Final check and approval before marking invoice as ready for payment.
Approved Invoice	Invoice is fully approved and marked for payment and sent to NetSuite via Integration
Payment Update	NetSuite processes the payment and sends the update to Coupa.
Paid	Final payment status reflected in Coupa.

3.2.2.2 Through Invoice Forms

Scenarios:

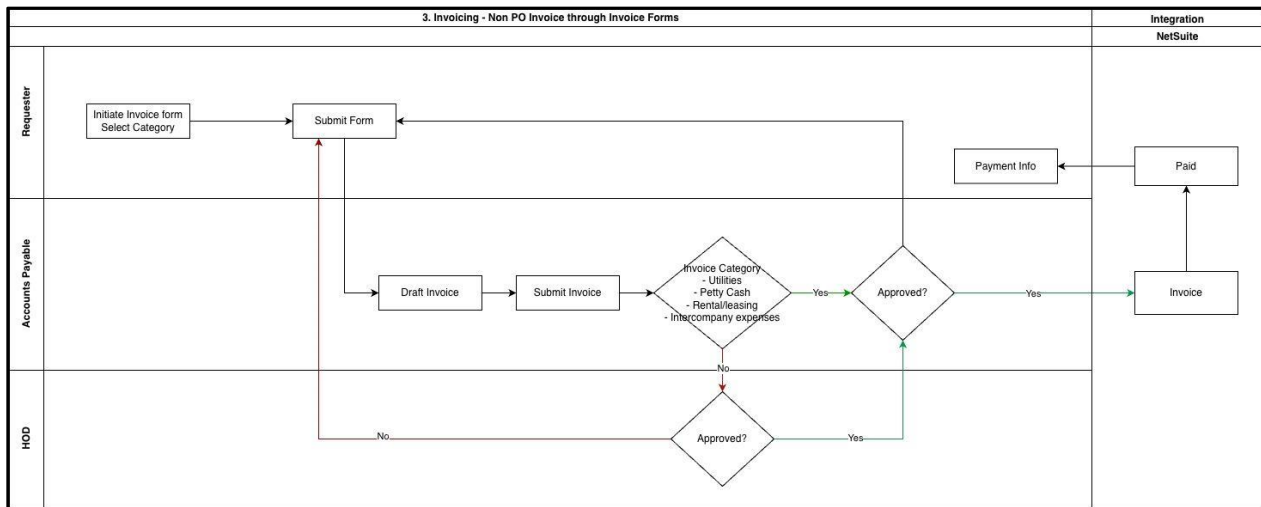

- Utilities - Internet, electricity, water, waste and sewer disposal, telco (mobile and landline) etc
- Trade Marketing Incentives - Incentives payout to sales individuals
- Rental/leasing - Building premise, house leasing, car yards, printer (rental and meter reading) etc
- People & Culture related expense - Medical (Health Metrics) , employment pass (SG), monthly employee's season parking, Expat/employee benefits
- Government & Public Affairs related expense - All taxes, stamping agreement, payment to Government, local councils, and statutory agencies such as taxes, stamp duty, licenses, penalty, summons, commission or interest paid to banks for processing payments,
- Training fee under HRD Corp - Training fee can be claimed under HRD Corp
- Finance Professional Services - Audit consultant, Tax consultant, Transfer pricing,
- Insurance - Any type of insurance related to property / company / employees insurance
- Intercompany related expenses - All type of intercompany expenses / recharge to Carsome Group,
- Petty Cash - Branches petty cash reimbursement
- Students allowance - Student Allowance for Students Practical
- One Off Vendor (Sundry Vendor) - One time vendor

Business Requirement Document (BRD) – Coupa Invoice Management

- Others - Courier services

Non-PO Invoice – Through Invoice Forms

Link : https://drive.google.com/file/d/1fJog67Z_yrBn3jNZQT7Z2CZYDkuYMUvI/view?usp=drive_link

Process	Description
Complete Invoice Form & Submit	Requester Fills the invoice form, add the Invoice Category (Petty Cash, Utilities, etc) and submits the Invoice in draft status in Coupa.
Invoice to Accounts Payable	Accounts Payable will pick the invoice in draft state and (Reference to the Raid Log S.No12)
Check & Update Info	Invoice is reviewed for completeness, with details validated and updated as needed and submit it for Approval.
Requester Approval	Requester reviews the invoice to confirm the legitimacy of the spend.
Final AP Clerk Approval	Final check and approval before marking invoice as ready for payment.
Approved Invoice	Invoice is fully approved and marked for payment and sent to NetSuite via Integration
Payment Update	NetSuite processes the payment and sends the update to Coupa.
Paid	Final payment status reflected in Coupa.

Reports can be extracted per Invoice category to Manage the spend. (Reference to the Raid Log S.No :7)

3.2.3 Credit Note Process

Credit Note Process

Link : https://drive.google.com/file/d/1t-mufpt2omhtdwrn5D5_Wx2zXJU8gHDo/view?usp=drive_link

In case of an errored invoice – Coupa provides an option to completely/partially cancel the invoice using Credit notes. A credit note is nothing but an invoice with a negative quantity.

You can create a credit memo from the **Orders** page under the **Action** column by clicking credit note icon. You can also create a credit note on the **Invoices** page by clicking the **Create** dropdown and choosing **Credit Note**.

Login to Coupa	These are the invoice which have to be bulk loaded in Coupa.
Download Template	The Invoice bulk template is downloaded. Fill in the required details in the template and
Click on start Upload	Click on start upload and upload the invoice template and the invoice will be created in draft status.
Accounts Payable submits the invoice	Invoice is reviewed for completeness, with details validated and updated as needed and submit the invoice for Approval
AP approve the invoice	Final check and approval before marking invoice as ready for payment.
Approved Invoice	Invoice is fully approved and marked for payment and sent to NetSuite via Integration
Payment Update	NetSuite processes the payment and sends the update to Coupa.
Paid	Final payment status reflected in Coupa.

(Reference to the Raid Log S.No :163)

3.3 INVOICE FLOW IN COUPA

3.3.1 Standard Invoices – Supplier Created

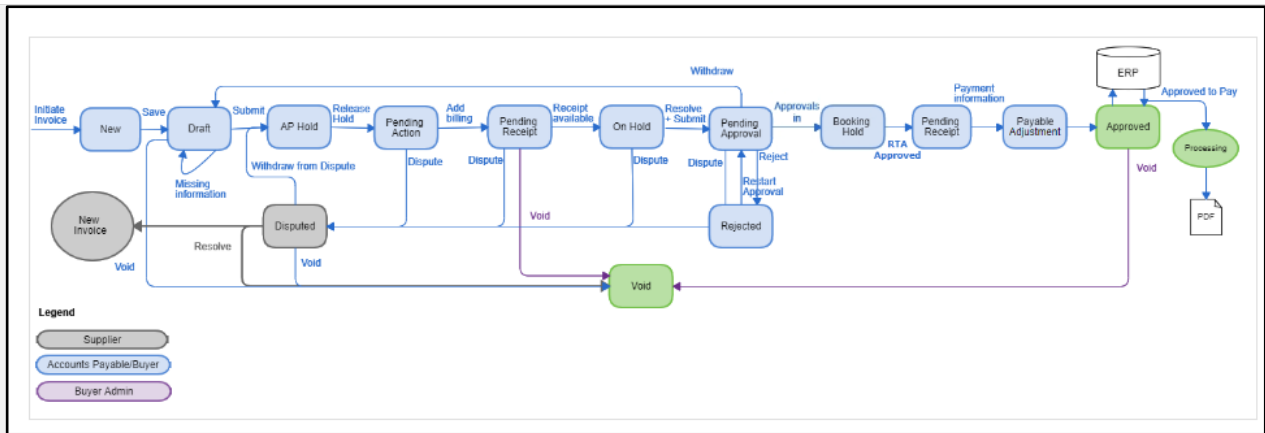

Status	Description
Draft	An invoice once saved is moved to a Draft status. Alternatively, creating an invoice through a PO flip moves it straight to Draft. When submitting a draft invoice, a variety of checks including the presence of compliance fields, duplicate invoice numbers, the presence of the invoice date, etc. are performed. Without this information, the invoice remains in draft status.
Processing	For the duration that the Legal PDF is being generated an invoice may show up in Processing status. This transition occurs after the supplier submits the invoice and before it shows up in AP's queue.
AP Hold	An invoice shows up in AP Hold if the Supplier record in Coupa is enabled to 'Hold Invoices for AP Review'.
Pending Action	Non-PO backed invoices can be configured to route to a named Requester user by the supplier. This is configured through Company Information > Define a requester for unbacked invoices. If enabled and it is missing a billing account for any of the invoice lines, the invoice will land in Pending Action. Also see: https://success.coupa.com/Support/Releases/24/New_Features/Core_Apps/Invoicing/Allow_Suppliers_to_Submit_Invoices_linked_to_Inactive_Accounts PO-backed invoices can come in Pending Action status if a custom submission blocker approval chain is setup to always evaluate the invoice.
Pending Receipt	If the invoice has progressed through the AP Hold check and the applicable match level is 3-way or 3-way-direct and if the invoice is not fully received, it goes into the Pending Receipt status. Once approved, an invoice may show up in Pending Receipt if any of the receipts allocated to the invoice earlier have been consumed by another invoice for the same PO. This scenario can occur when using 3-way match. Note: CARSOME will be using the 3-way match functionality at the beginning before the invoice routes for approvals.
On Hold	Invoices enter on hold, if: - The Setup > Approvals > Invoices > Route to approval without showing Invoice Requires Approval setting is disabled and one of the following: - The invoice breaches a configured tolerance for its COA. - The supplier records setting Always route invoices from this supplier to approval is enabled.

Business Requirement Document (BRD) – Coupa Invoice Management

	○ At least one invoice line's required match levels are not met (e.g., a 2-way match invoice line is missing a PO) ● The invoice is from CSP: ○ Not all tax lines are valid. ○ A submission blocking approval chain is triggered. ○ When the Company Information > Define a requester for unbacked invoices setting is disabled and the billing is invalid. When the Company Information > Define a requester for unbacked invoices setting is enabled and the assigned requester is not a valid user.
Pending Approval	If a tolerance fails or a custom approval chain is setup to always evaluate the invoice, it would be in Pending Approval.
Booking Hold	If Supplier provides a remit-to address on the invoice that is not mapped to an enterprise remit to address in Coupa. This status is reachable if either: ● Company Information > Put invoices from new Supplier Remit to Addresses on Booking Hold is enabled. Enterprises > Vendor Remit-To Required is enabled.
Approved	If the invoice required approvals and all required approvers have approved the invoice it will move to an approved status. Once approved, an invoice runs through a couple of additional checks before it is labelled as Approved. These checks ensure that can be correctly synced into the ERP and has run the matching validations correctly: <i>Approved</i> → <i>Booking Hold Check</i> → <i>Pending Receipt Check</i> → <i>Approved to Pay</i>.
Disputed	Invoices in AP Hold, Pending Action, Pending Receipt, On Hold, or Rejected statuses can be Disputed and sent to the supplier for corrections. Disputing an invoice requires a dispute reason and sends an email notification to the supplier contract on record and any additional listed recipients. Once disputed, an invoice can be Withdrawn from Dispute by Accounts Payable or Resolved by the supplier.
Rejected	An internal status that suppliers cannot see indicating that an approver or approval group rejected the invoice. Customers should have a process in place to filter these invoices in a view so their Accounts Payable team can action them. A decision can then be made to either restart approvals, continue approvals, or dispute the invoice back to the supplier.
Void	Resolving a disputed invoice would move the Disputed version to Void. Once disputed, an invoice can be voided by an AP user. Invoices in Pending Receipt or Approved are allowed to be Voided by the Admin role.
Payable Adjustment	Indicates the invoice has available balances that can be applied to the invoice net balance as adjustments. After you apply adjustments to the invoice, it moves to Approved status.

3.3.2 Standard Invoices – Internally Created

Business Requirement Document (BRD) – Coupa Invoice Management

Status	Description
Draft	When an invoice is saved it moves to Draft status. If any of the following actions occur, then it will move the invoice to Draft: - Creating an invoice through a PO flip moves it straight to Draft. - A user using the PO line picker on a non-PO backed invoice. - CSV loaded invoice with Submit for Approval as blank or no. - Withdraw an invoice from a Pending Approval status. - A cXML or CSV loaded invoice with errors. When submitting a draft invoice, a variety of checks including duplicate invoice number, presence of invoice date, etc. are performed. Without this information, the invoice will remain in draft status.
On Hold	When 'Route to approval without showing Invoice Requires Approval' is unchecked, in the scenario where the internal user is submitting an invoice and the invoice requires approval, the 'On Hold' status is an interim status. The invoice will appear to move directly to 'Pending Approval' if you click submit on the 'Invoice Requires Approval' pop-up. If you close it, the invoice will remain in On-Hold status.
Booking Hold	If the requester (buyer) enters a new Supplier Remit to Address that is not yet mapped or approved, then the Booking Hold status is used to ensure a review and approval of the new payment address. Company Information > Put invoices from new Supplier Remit to Addresses on Booking Hold is enabled. Enterprises > Vendor Remit-To Required is enabled.
Dispute	Invoices in AP Hold, Pending Action, Pending Receipt, On Hold, Pending Approval or Rejected statuses can be Disputed to the supplier for corrections. Disputing an invoice requires a dispute reason and sends an email notification to the supplier contract on record and any additional listed recipients. Once disputed, an invoice can be Withdrawn from Dispute by Accounts Payable or Voided; or Resolved by the supplier.
Void	Resolving a disputed invoice would move the Disputed version to Void. Once disputed, an invoice can be voided by an AP user. Invoices in Pending Receipt or Approved are allowed to be Voided by the Admin role.

Business Requirement Document (BRD) – Coupa Invoice Management

Processing	Standard invoices do not have legal PDFs but can be configured to archive the invoice created in Coupa. This PDF generation for non-compliant and buyer invoices happens after the approval process.
Payable Adjustment	Indicates the invoice has available balances that can be applied to the invoice net balance as adjustments. After you apply adjustments to the invoice, it moves to Approved status.

3.3.3 Invoice Matching

Coupa supports matching invoices against purchase orders and receipts, which helps ensure that your suppliers are invoicing you accurately. Matching determines if an invoice can be “approved” or needs to go “on-hold” for additional review and approval.

In Coupa, you can set whether 2-way, 3-way matching, or 3-way direct matching is required for supplier invoices, the final decision for CARSOME is to set 3-way matching for all suppliers:

Matching Type	Description
2-way matching	2-way matching requires that every invoice be associated with a backing purchase order. If a purchase order does not exist, the invoice is placed on hold and will require Accounts Payable to review and approve. If 2-way matching is satisfied, the invoice can be automatically approved.
3-way matching	3-way matching requires that every invoice be associated with both a backing purchase order and receipt. If either a purchase order or receipt is missing, the invoice is placed on hold or “pending receipt” status. If 3-way matching is satisfied, the invoice can be automatically approved. The receipt matching is automatic in this case.
3-way direct matching	3-way direct matching requires the AP to manually select from the available list of receipt for the specific invoice line.

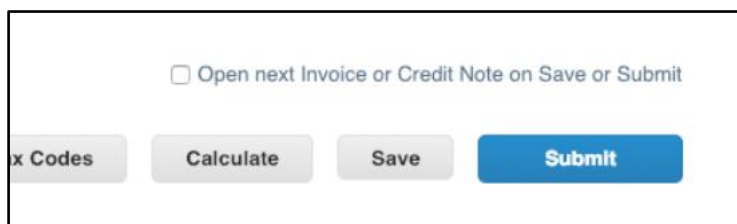

3.3.4 Editing Invoice in a Sequence

Edit several invoices in a row without having to exit the current screen that you are viewing invoices.

To make invoice lists more efficient to process, you can move from the current invoice to the next in the list when you hit Save or Submit without going back to the list view. This option is available while editing invoices in such a list via data table views.

How it works?

Once enabled, if an AP user accesses an invoice to edit from the invoices tab, they should see the following on the invoice view:

☐ Open next Invoice or Credit Note on Save or Submit

x Codes Calculate Save Submit

Before selecting **Save** or **Submit**, the AP user can select **Open next Invoice/Credit Note on Save or Submit** to move straight to the next document to edit.

3.3.5 Tolerances

Coupa runs invoice tolerances to determine whether invoices can be automatically approved, or if they are exceptions that need further review and approval.

Tolerances for Malaysia will be set in on Amount based.

Tolerance should be set at 8% SST Variance.

(Reference to the Raid Log S.No :66,165)

(Reference to the Raid Log S.No :211)

Tolerances For other Entity will be set as below:

Receiving Tolerances

Received line quantity compared to ordered line quantity	0%
Received service amount compared to the ordered	0 USD

Invoicing Tolerances

Invoiced quantity greater than PO by quantity Suppliers are restricted to over invoice Purchase order value.	0
Invoiced amount (pending & approved) greater than PO by amount for amount-based invoices	0 USD
Invoice line unit price compared to PO line unit price	0 USD

(Reference to the Raid Log S.No :66,83)

3.3.6 On Hold Invoices

An invoice goes on 'Pending Receipt' or 'On hold' status in Coupa if it does not satisfy matching or invoice tolerance rules.

Reason	Description
Missing PO	Supplier is set to 2-way match where every invoice needs a backing PO. The invoice on hold is missing the backing PO.
Not Received	Supplier is set to 3-way match where every invoice needs a backing PO and receipt. A receipt is missing for this invoice line.
Tolerance hold	An invoice line has failed one of the tolerance rules when compared against backing PO line.
Invoice Status: On hold when invoice line(s) matched PO line(s)	Invoice line has passed the line tolerance checks, but the invoice is on hold for additional tolerance rules that were set on the

Reason	Description
	invoice total or shipping/handling/tax and/or other extra charges

3.3.7 Tolerances - Chart of Account / Commodity level

Coupa runs invoice tolerances to determine whether invoices can be automatically approved, or if they are exceptions that need further review and approval. Coupa provides two types of invoice tolerance settings:

- Chart of Accounts-level tolerances
- Commodity-level tolerances

Coupa measures some tolerances against PO-backed lines. These tolerances apply to PO-backed invoices only. Coupa measures tolerances using currency values and percentages. Each tolerance is clearly labelled in the tolerance table.

Coupa breaks these tolerances up into two different groups:

1. Supplier created invoices: tolerances for invoices created through -
 - The Coupa Supplier Portal (CSP)
 - Supplier Actionable Notifications (SAN)
 - Invoice Inbox
 - CSV Invoices
 - Internally entered invoices
2. Commodity-level tolerances work as an override to chart of account tolerances. In other words: If a commodity-level tolerance is not set, then Coupa uses the main tolerances for receiving and invoicing, the ones set up under **Setup > Invoicing > Invoice Tolerances**. Commodity-level tolerances apply to all Charts of Accounts.

Note: If in future any commodity-level tolerance is set, then Coupa uses this tolerance in place of the main tolerances set for receiving and invoicing.

3.3.7.1 Setting up Chart of Accounts-Level Tolerances

To set up a Chart of Accounts-level tolerance:

- Go to **Setup > Invoicing > Invoice Tolerances**.
- Select the Chart of Accounts you want to update.

3.3.7.2 Setting up Commodity-Level Tolerances

To set up a commodity-level tolerance:

- Go to **Setup > Company Setup > Commodities**.
- Click the Edit button next to the commodity you want to update.
- Click the type of tolerance you want to update, Invoice Tolerances or Receiving Tolerances.
- Click Save and verify if the tolerance has been turned ON.

Business Requirement Document (BRD) – Coupa Invoice Management

- Invoices**
- ☐ Build approval path based on original requesters' management hierarchies
 - ☒ Build approval path based on approval chains
- Invoices self-approvals:
- ☐ Allow self-approvals in Management Hierarchy and Approval Chains
 - ☒ Don't allow self-approvals in Management Hierarchy
 - ☒ Also prevent self-approval when part of an approval chain or approval group
 - ☐ Allow approvers (delegator or delegates) other than the requester in a node to approve.
 - ☐ Enable adding approvers and watchers
 - ☐ Route to approval without showing Invoice Requires Approval
 - ☐ Evaluate tax rate chain conditions against "buyer" as well as "supplier" invoices.
 - ☐ Apply supplier submission blocking approval chains to integrated channels(cXML & sFTP)

For Direct entry of PO invoices, no self-approval allowed in Coupa

[\(Reference to the Raid Log S.No :77\)](#)

3.3.8 Invoice Submission Blockers

Submission Blocker will stop user from submitting the PR/PO or Invoice if it doesn't fulfil the criteria set by Admin for that respective document. Admin can also allow user to submit the document with just a soft warning message.

We have configured below Submission Blockers/Warning for Carsome:

1. If user creates non-PO invoices and submits the invoice without selecting the requester details, System will block the invoice submission with message "Please add the Requester details for Non-PO Invoice creation".
2. If the Invoice Tolerance for Malaysia Entity for Amount not matching the PO is enabled and AP users not add the Reason code before approving invoice, System will block the invoice submission with message "Add the reason code for tolerance on the invoice."
3. Added a submission warning on the supplier created invoice where this warning would notify suppliers "The invoice date entered is earlier than the PO date, prompting them to review and confirm the information before submission".

3.5 REPORTING

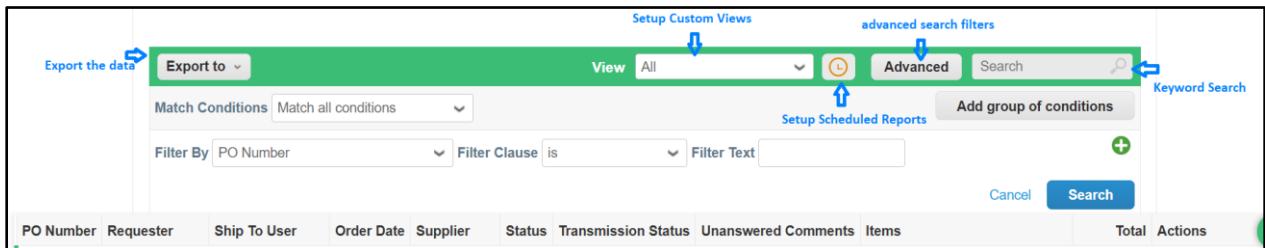

Coupa has several levels of reporting:

- Standard reporting, available directly from Coupa data tables. You can filter the data in these data tables, create custom views, and export it directly, or set up regularly scheduled reports to be emailed to specified Coupa users on a regular basis.
- Advanced reporting, available primarily for power users. Coupa provides a list of common, pre-made reports from your Coupa tables. Reference this list before creating your own custom reports.
- Dashboards, which are pre-made to help you get a quick and easy visual of some key industry key performance indicators.

Standard Reporting

From most data tables in Coupa, you can:

- Export the current table view to Excel and work with its data there, for more detailed calculations.
- Set up custom views that filter exactly for the data set you want.
- Set up scheduled reports, based off any standard or custom view. See Custom Views and Scheduled Reports for details.
- Search, using the basic keyword search or the advanced search criteria.
- View real-time statistics off the dashboards, which update based on the view or search results you're viewing. Not all tables have dashboards.

The screenshot displays the Coupa reporting interface. At the top, there are links for 'Export the data', 'Setup Custom Views', 'advanced search filters', and 'Keyword Search'. Below these, a green bar contains an 'Export to' dropdown, a 'View' dropdown set to 'All', and an 'Advanced' search button. A 'Search' input field is also present. Below the green bar, there are sections for 'Match Conditions' (set to 'Match all conditions') and 'Filter By' (set to 'PO Number'). A 'Filter Clause' is set to 'is', and a 'Filter Text' input field is provided. A 'Setup Scheduled Reports' link is also visible. At the bottom, a table header is shown with columns: PO Number, Requester, Ship To User, Order Date, Supplier, Status, Transmission Status, Unanswered Comments, Items, Total, and Actions. A 'Cancel' button and a 'Search' button are located at the bottom right of the filter section.

You can turn this feature on under the **Company information** settings.

The invoice control total field:

- Is not populated or enforced for inbound flat file integration or CSV invoices, only manually entered invoices.
- Can be shown as a column on custom views.

[illegible]

3.7 ROLES

Role	Description
Admin	Full system access to setup and maintain the application
User	Standard role for all users who need to create and/or approve requisitions
Buyer	Adds ability to manage requisitions, orders, RFQs, suppliers and items, plus access to purchase order reports
Accounts Payable	Adds ability to manage suppliers, view orders and create invoices
Accounting Supervisor	Adds ability to manage suppliers, financial setup, budgets and approve on-hold invoices
Edit Requisition as Approver	Adds ability to edit a requisition when you are approving it
Edit Invoice as Approver	Adds ability to edit an invoice when you are approving it

(Reference to the Raid Log S.No :205,206)

4. KEY DECISIONS MADE & EXCEPTIONS (IF ANY)

Procure To Pay		
All the key decisions made by CARSOME team during the Requirement Gathering workshops and the sessions held offline/internal testing thereafter are covered below with their status.		
S. No	Key decisions	Status
1	A "0" value tolerance will be configured for invoicing tolerance checks. <i>(Reference to the Raid Log S.No :66)</i>	Enabled
2	Group Reporting currency for Carsome is USD. <i>(Reference to the Raid Log S.No :27)</i>	Enabled
3	Central receiving role to be enabled for Exception cases	Enabled

5. ACKNOWLEDGEMENT AND SIGNATURE

The undersigned do hereby agree to the information mentioned above as well as to the information mentioned in the above pages in this document.
